Please find below and/or attached an Office communication concerning this application or proceeding.

		· · · · · · · · · · · · · · · · · · ·					
. 3	Application No.	Applicant(s)					
	09/905,532	ROGERS ET AL.					
Office Action Summary	Examiner	Art Unit					
	Kevin Schubert	2137					
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will; by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
1) Responsive to communication(s) filed on 30 Ja	nuary 2006.						
·—	action is non-final.						
·	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is						
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.							
Disposition of Claims							
4)⊠ Claim(s) <u>1,4,5,8-17 and 20</u> is/are pending in the application.  4a) Of the above claim(s) is/are withdrawn from consideration.							
5) Claim(s) is/are allowed.							
6)⊠ Claim(s) <u>1,4,5,8-17,20</u> is/are rejected.							
7) Claim(s) is/are objected to.							
8) Claim(s) are subject to restriction and/or election requirement.							
Application Papers							
9) The specification is objected to by the Examine	r.						
10)☐ The drawing(s) filed on is/are: a)☐ accepted or b)☐ objected to by the Examiner.							
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).							
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.							
Priority under 35 U.S.C. § 119							
12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  a) All b) Some * c) None of:							
1. Certified copies of the priority documents have been received.							
2. Certified copies of the priority documents have been received in Application No							
3. Copies of the certified copies of the priority documents have been received in this National Stage							
application from the International Bureau (PCT Rule 17.2(a)).							
* See the attached detailed Office action for a list of the certified copies not received.							
Attachment(s)							
1) Notice of References Cited (PTO-892)	4) Interview Summary

#### **DETAILED ACTION**

Claims 1,4-5,8-17, and 20 have been considered. Examiner maintains the rejection presented in the previous action.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,4-5 and 10-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Chambers,

U.S. Patent No. 5,398,196.

As per claims 1,10,11,12, and 14, the applicant discloses the following method of detecting viral code which is anticipated by Chambers:

- a) creating an artificial memory region spanning one or more components of the operating system (Col 7, line 63 to Col 8, line 21; Col 7, lines 23-28);
  - b) creating a custom version of an export table, wherein the custom version of the export table is associated with a plurality of entry points and wherein the entry points comprise predetermined values (Col 9, lines 13-32);
- c) emulating execution of at least a portion of computer executable code in a subject file (Col 3, lines 42-45);
  - d) monitoring operating system calls by the emulated computer executable code (Col 6, line 68; Col 7, lines 1-15);
  - e) identifying an operating system call that the emulated computer executable code attempted to access (Col 9, lines 13-25; Col 9, lines 44-54);

Art Unit: 2137

5

10

15

20

25

f) deciding, based on the identified operating system call, whether the emulated computer executable code comprises viral code (Col 9, lines 13-25; Col 9, lines 44-54);

As per claims 4 and 16, the applicant discloses the method of claim 1, which is met by Chambers (see above), with the following limitations which are also met by Chambers:

a) emulating functionality of the identified operating system call while monitoring the operating system call to determine whether the computer executable code is viral (Col 9, lines 13-25; Col 9, lines 44-54);

The applicant should note that the operating system call is the attempt to gain access to an operating system entry point. Through emulation of an interrupt handler routine, the method is able to monitor whether a virus is present.

As per claims 5 and 17, the applicant discloses the method of claim 1, which is met by Chambers (see above), with the following limitations which are also met by Chambers:

- a) monitoring accesses by the emulated computer executable code to the artificial memory region to detect looping in the execution of the emulated computer executable code (Col 3, lines 51-53; Col 3, line 64 to Col 4, line 14);
- b) determining based on a detection of looping whether the emulated computer executable code is viral (Col 3, lines 51-53; Col 3, line 64 to Col 4, line 14).

As per claims 13 and 15, the applicant discloses the method of claims 12 and 14 respectively, which are met by Chambers (see above), with the following limitations which are also met by Chambers:

a) a fourth segment comprising auxiliary code, wherein the auxiliary code determines an operating system call that the emulated computer executable code attempted to access (Col 9, lines 13-25; Col 9, lines 44-54);

Art Unit: 2137

b) a fifth segment comprising analyzer code, wherein the analyzer code monitors the operating system call to determine whether the computer executable code is viral, while emulation continues (Col 9, lines 13-25; Col 9, lines 44-54);

Page 4

The applicant should note that the monitor described in the passages listed for a) and b) above could be deemed as auxiliary or analyzer code. The operating system call is the attempt to gain access to an operating system entry point.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 8,9, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chambers in further view of Golan, U.S. Patent No. 5,974,549.

As per claim 8, the applicant describes the method of claim 1, which is anticipated by Chambers (see above), with the following limitation which is anticipated by Golan:

Further comprising monitoring access by the emulated computer executable code to dynamically linked functions (Col 6, lines 6-12; Col 5, lines 60-63);

Chambers describes all the limitations of claim 1, the independent claim. However, Chambers fails to disclose anything concerning dynamically linked functions. Golan describes a security monitor method whereby access to dynamically linked functions is regulated because, as Golan discloses, "in an operating system that supports virtual memory and hardware abstraction, a software component can only breach security by calling a system call" (Col 5, lines 38-41). It would have been obvious to one of ordinary skill in that art at the time the invention was filed to have combined the teachings of Chambers

5

10

15

20

25

with those of Golan and monitor access to dynamically linked functions because requesting access to dynamically linked functions could be an attempt to breach security.

As per claim 9, the applicant discloses the method of claim 8, which is met by Chambers in further view of Golan (see above), with the following limitation which is met by Golan:

Wherein the artificial memory region spans a jump table containing pointers to the dynamically linked functions (Col 7, lines 31-35);

Chambers in further view of Golan describes all the limitations of claim 8. Golan describes the additional limitation of a jump table containing pointers to the dynamically linked functions. The jump table is often incorporated with dynamically linked functions to store the actual addresses of the dynamically linked functions. It would have been obvious to one of ordinary skill in the art at the time in the invention was filed to have included a jump table with the method so that there could be a way of storing the actual addresses of the dynamically linked functions.

As per claim 20, the applicant discloses the method of claim 14, which is met by Chambers (see above), with the following limitation which is met by Golan:

Wherein the artificial memory region created by the memory manager component spans a jump table containing pointers to dynamically linked functions, and the monitor component monitors access by the emulated computer executable code to the dynamically linked functions;

The claim is met by the combination of claims 8 and 9. Explanations for claim 8 and 9 rejections are listed above.

#### Response to Arguments

Applicant's arguments, see Remarks filed 1/30/06, with respect to the 102(b) rejection of claim 1 under Chambers have been fully considered but they are not persuasive. Applicant presents the following arguments:

(1) Chambers does not identify an operating system call

Art Unit: 2137

5

10

20

25

(2) Chambers does not decide whether code is viral based on an identified operating system call

Examiner respectfully disagrees with the above argument and submits that Applicant may have mischaracterized the Chambers reference. Chambers discloses a method of detecting computer viruses. The detection method utilizes a monitor program to analyze a target program. In particular, the monitor program determines whether the target program replaces an interrupt handler with a routine of its own (Col 9, lines 23-25). The interrupt handlers represent operating system calls. If replacement of an interrupt handler occurs, the method "sacrifices" a guinea pig file to a potential viral interrupt handler (Col 9, lines 62-64). The potential viral interrupt handler executes, thereby executing operating system calls, and a determination is made as to whether the potential interrupt handler is viral (Col 9, line 62 to Col 10, line 19).

Thus, Chambers does identify an operating system call (1) and does decide whether code is viral based on an identified operating system call (2). Accordingly, the rejection is maintained.

15 Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Schubert whose telephone number is (571) 272-4239. The examiner can normally be reached on M-F 7:30-6:00.

Art Unit: 2137

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Emmanuel Moise can be reached on (571) 272-3865. The fax phone number for the organization where

this application or proceeding is assigned is 571-273-8300.
